Search Environments

base (root)

2. Set ENV name to "dsde"

Create new environment

Name: dsde

Location:

Packages: ☒ Python 3.12.15 ☐ R

Cancel Create

1. Click "Create" here

3. Set Python package to version 3.12

4. Create the environment

Name	Description	Version
bzip2	High quality data compressor	1.0.8
Certificates for use with other packages.		2025.2
A portable foreign function interface library		3.4.4
Libraries for next-generation data science		2.7.4
Array processing for numbers, strings, records, and objects.		2.2.6
Openssl is an open-source implementation of the ssl and tls protocols		3.0.16
Python 3.12.15		23.1
pip	Pypa recommended tool for installing python packages	25.0
python	General purpose programming language	3.10.16
python-dateutil	Extensions to the standard python datetime module	2.9.0.post
pytz	World timezone definitions, modern and historical.	2025.2
readline	Library for editing command lines as they are typed in	8.2
setuptools	Download, build, install, upgrade, and uninstall python packages	75.8.0

20 packages available

Option (1) Anaconda UI

5. Run the environment through terminal here

```
Last login: Sun Oct 4 17:22:52 on ttys000
. /opt/anaconda3/bin/activate && conda activate /opt/anaconda3/envs/dsde;
(base) prommin@Mac ~ % . /opt/anaconda3/bin/activate && conda activate /opt/anaconda3/envs/dsde;
(dsde) prommin@Mac ~ % pip install pandas==2.2.3 scikit-learn==1.5.2
```

6. pip install python libraries here:

pip install pandas==2.2.3 scikit-learn==1.5.2

!! Make sure the dsde environment is activated before installing packages.

Option (2) Conda command line tool

1. Create conda env with name and python package

```
(base) prommin@Mac ~ % conda create -n dsde python=3.12
```

2. Activate conda env with the created name

```
#  
# To activate this environment, use  
#  
#     $ conda activate dsde  
#  
# To deactivate an active environment, use  
#  
#     $ conda deactivate  
  
(base) prommin@Mac ~ % conda activate dsde
```

!! Make sure the dsde environment is activated before installing packages.

3. pip install python library through terminal

```
(dsde) prommin@Mac ~ % pip install pandas==2.2.3 scikit-learn==1.5.2
```

How to Use the dsde Environment

New

1) How to Run a .py File in VS Code Using the dsde Environment

1. cmd(ctrl) + shift + P -> to open this window

3. Then select the created env

4. You can run the code here

2) How to Run a Jupyter Notebook (.ipynb) in VS Code Using the dsde Environment

1. Select Kernel here

2. Select “Python Environments”

3. Select the env name you created

4. Done

3) How to Run a .py File in the Terminal Using the dsde Environment

The screenshot shows a terminal window with tabs for Problems, Output, Debug Console, Terminal, and Ports. The Terminal tab is active. It displays two lines of command history: the first line shows the command `conda activate dsde` being executed, and the second line shows the command `python main.py` being executed. The prompt for the second line is `(dsde) prommin@Mac attachment %`.

```
Problems 1 Output Debug Console Terminal Ports
● (base) prommin@Mac attachment % conda activate dsde
○ (dsde) prommin@Mac attachment % python main.py
```

Open your terminal ->
activate your conda env ->
run your python file
